

Supplementary figure 1. IL-7R α is down regulated in endogenous antigen specific CD8 T cells with LCMV infection.

Naïve C57/BL6 mice were infected with 2×10^5 LCMV and IL-7R α protein was measured in naïve and infected mice from days 4 – 8 using flow cytometry. Top row show gating criteria for D^b GP33-41 MHC class I tetramer positive antigen specific CD8 T cells. Bottom row plots show expression of IL-7R α on antigen specific CD8 T cells. The percentage of IL-7R α ^{hi} CD8 T cells is indicated in each plot.
